

Reg. no 58

GEOGRAPHICAL INDICATION

Honey from Kacer

Description:

Honey from Kacer is a flower honey produced exclusively in the conditions of stationary or modified stationary bee-keeping from the domestic bee *Apis mellifera carnica* by collecting and processing nectar of the flowers of lime tree, locust-tree and herbal plants mostly with medical properties. The color of honey varies from very light to moderately light, from the transparent light yellow to yellow, light redish and orange. Aroma is very pleasant with conspicuous dominating tome of locust tree honey with the spice of lime tree honey. The taste is pleasant and recognizable.

Geographical area:

The district of Kacer
